ບົດທີ 11

Web Application Framework

ເນື້ອໃນໂດຍລວມ

- ແນະນຳກ່ຽວ Framework ເບື້ອງຕົ້ນ
- ຮູບແບບ Framework
- ການເຮັດວຽກຂອງ MVC
- ການເລືອກໃຊ້ Framework
- Yii Framework

ແນະນຳກ່ຽວ Framework ເບື້ອງຕົ້ນ

- PHP Framework

ຮູບແບບ Framework

- Model–view–controller (MVC) ເປັນການອອກແບບໂຄງສ້າງຊອບແວ້ເພື່ອໃຫ້ງ່າຍໃນການພັດທະນາ, ຊຶ່ງແບ່ງຊອບແວ້ອອກເປັນ 3 ພາກສ່ວນທີ່ມີການພົວພັນກັນ.

ການເຮັດວຽກຂອງ MVC

- Controller ສາມາດສົ່ງຄໍາສັ່ງໄປຍັງ Model ເພື່ອປ່ຽນແປງ ຫຼື ແກ້ໄຂຂໍ້ມູນ. ນອກນັ້ນ, ຍັງສາມາດສົ່ງຄໍາສັ່ງໄປຍັງ View ເພື່ອປ່ຽນແປງການສະແດງຜິນຂໍ້ມູນ ຫຼື ນຳຂໍ້ມູນຈາກ Model ມາສະແດງຢູ່ໃນ View ໄດ້.
- Model ເປັນຊຸດຄຳສັ່ງທີ່ເຮັດວຽກຢູ່ເບື້ອງຫຼັງ, ຊຶ່ງ Model ຈະແຈ້ງໃຫ້ Controller ແລະ View ເມື່ອມີການປ່ຽນແປງຂໍ້ມູນ.
- View ນຳໃຊ້ໃນການສະແດງຜິນຂໍ້ມູນຈາກ Model

ການເລືອກໃຊ້ Framework

- ສິ່ງທີ່ຄວນຄໍານຶງກ່ອນການ ຕັດສິນໃຈເລືອກນໍາໃຊ້ Framework.
 - ຈຸດປະສົງຫຼັກກ່ອນການພັດທະນາເວບແມ່ນຫຍັງ? (directory, a social communicating website, e-commerce platform)
 - ສະພາບແວດລ້ອມທີ່ນໍາໃຊ້ຢູ່ເປັນແບບໃດ? (ລະບົບ, ຖານຂໍ້ມູນ ແລະ framework ທີ່ນໍາໃຊ້ຢູ່)
 - ເຄື່ອງມືທີ່ຜູ້ພັດທະນາທະນັດທີ່ສຸດແມ່ນອັນໃດ? (user-friendly framework)

ການເລືອກໃຊ້ Framework

- **ຮູບແບບຂອງ PHP Frameworks**

- Glue Framework: ບໍ່ມີເຄື່ອງມືຊ່ວຍ, ສໍາລັບຜູ້ພັດທະນາທີ່ມີຄວາມສາມາດໃນການພັດທະນາສູງ.
- Full stack Framework: ມີການຕັ້ງຄ່າ Framework ເພື່ອໃຫ້ງ່າຍຂຶ້ນ, ສໍາລັບຜູ້ພັດທະນາໃນລະດັບເລີ່ມຕົ້ນ.
- Mixed framework: ເປັນການລວມທັງແບບ Glue Framework ແລະ Full stack Framework ເຂົ້າກັນເພື່ອໃຫ້ຜູ້ພັດທະນາສາມາດເລືອກໄດ້.

Yii Framework

- Yii ເປັນ PHP Framework ທີ່ທັນສະໄໝ, ມີປະສິດທິພາບໃນການເຮັດວຽກສູງ ແລະ ເໝາະສົມສໍາລັບການນໍາໃຊ້ເພື່ອພັດທະນາ Web Application ແລະ API.

The screenshot shows the official Yii Framework website. At the top is the logo and navigation links: about, downloads, documentation, development, and community. The main heading reads 'The Fast, Secure and Professional PHP Framework'. Below this, it states 'Yii is a high-performance PHP framework best for developing Web 2.0 applications.' and lists features like MVC, DAO/ActiveRecord, and caching. A sidebar on the right lists 'Three steps to build your application rapidly: 1. You create the database; 2. Yii generates the base PHP code; 3. You customize the code to fit your exact needs.' with buttons for 'Take the Tour' and 'Download Yii'. The bottom section highlights three key features: Fast (with a clock icon), Secure (with a shield icon), and Professional (with a globe icon), each with a brief description of its benefits.

The Fast, Secure and Professional PHP Framework

Yii is a [high-performance](#) PHP framework best for developing Web 2.0 applications.

Yii comes with [rich features](#): MVC, DAO/ActiveRecord, I18N/L10N, caching, authentication and role-based access control, scaffolding, testing, etc. It can reduce your development time significantly.

Three steps to build your application rapidly:

1. You create the database;
2. Yii generates the base PHP code;
3. You customize the code to fit your exact needs.

[Take the Tour](#) [Download Yii](#)

Or dive directly into Yii with [screencasts](#) or [guide](#) [2.0.13](#) released on Nov 3, 2017 [1.1.19](#) released on June 8, 2017

Fast
Yii only loads the features that you need. It has powerful caching support. It is explicitly designed to work efficiently with AJAX.

Secure
Security comes as standard with Yii. It includes input validation, output filtering, SQL injection and Cross-site scripting prevention.

Professional
Yii helps you develop clean and reusable code. It follows the MVC pattern, ensuring a clear separation of logic and presentation.
